

SEP 27 2011

Do you know your genetic makeup can affect how Plavix[®] is working?

- Genetic testing will allow your pharmacist to determine how well Plavix[®] (clopidogrel) works for you.
- Up to 20% of people (1 in 5 people) are not able to convert Plavix[®] to the active drug that prevents heart attacks and strokes.

Are you interested in participating in a research study at Kerr Drug?

- If you participate in this research study, you will have a personalized medicine test done at Kerr Drug.
- Personalized medication tests allow your pharmacist to use your genetics to see how some medications work for you.
- Qualifying participants who are taking Plavix[®] will be given a free genetic test to see how well Plavix[®] works in their body.

If you are interested in participating in this research study or have any questions, please call Kerr Drug in Chapel Hill at **919-918-7595** and reference the Plavix research study. Alternatively, you can check below and return this form to your pharmacist.

- I, _____ (your name), would like to be contacted about this research study.

If you are **NOT** interested in this research study, please check the box below and return this form to the pharmacist.

- I, _____ (your name), do **NOT** wish to be contacted about this research study.
